**M.H. PANHWAR**

I have in my possession about 500 maps of Sindh pertaining to history, historical geography, changing courses of the river Indus, archaeology, physical and topography, geology, ground-water and administrative units, listed in my book "Source Material on Sindh".

In search of rare maps recently I visited Royal Geographical Society, British Museum, India Office Library in London and was able to locate in these institutions' map departments respectively 48, 31 and 49 maps so far unknown to me. I was also able to get list of 92 maps in the map manuscript section of National Archives of India, New Delhi. The book section of India Office Library has 221 maps, most of them in administrative reports of each Taluka issued periodically. The only important U.K source, which could not be examined was Admiralty Museum at Greenwich. From the studies of these maps as well as the reports of British Missions to Sindh it is now confirmed that British were surveying Sindh since 1808 AD. The major part in surveying and preparation of maps was played by Nicolas Hanksy Smith, Pottinger, Todd. Masson, James Burnes, Del Hoste and Alexander Burnes. After the treaty with Talpurs in 1832 AD, large scale surveys were undertaken in which Carless, Campbell Margary, John Jacob and Messuir did not remarkable work. These officials used most indigenous methods and instruments for the purpose and one cannot but credit them for untiring work in the oppressive climate of Sindh. The Talpurs neither understood these methods, nor were they suspicious of it. By 1843 AD, the whole Sindh except hills between Manchar and Shahdad Kot had been surveyed and mapped. The Sindh map of 1846 was based on these surveys, in which hundreds of maps were used. A map of the routes of some of these pioneers super-imposed on a modern map of Sindh has been prepared by me from their reports. It gives the picture of areas surveyed and mapped, in the very presence of unsuspecting rulers of Sindh.

The early maps of Sindh were drawn by individuals who were some times accompanied by Quarter Master General of Bombay Army who was attached to the Bombay army, and later on was replaced by Survey of India staff. Some maps were also prepared from different sources like tourists diaries etc., in London, Admiralty maps of coastal areas were invariably done in England. The Bombay Presidency also issued some useful maps periodically. They were usually administrative and statistical maps, issued from both Bombay and Poona.

Usual scales of maps of Survey of India were 1 mile to 2 inches, 1 mile to 1 inch, 2 miles to 1 inch, 8 miles to 1 inch, 16 miles to 1 inch and 32 miles to 1 inch, where a mile meant 5,280

feet or one British mile. But some times odd scales were also used for example: 100 miles to 64 mm, 12 miles to an inch, 11 miles to 1 inch, 600 yards to 1 inch, 300 feet to 1 inch, 2-2/3 miles to 1 inch. Scale was invariably written on the map.

### Spellings of places.

Spelling of Sindh varied. In the 18<sup>th</sup> century it was written as Scindy. From 1809 it became Scind. It was written as Sinde by Del Hoste in 1832. Soon afterwards it was spelled as Scind and Scinde. In 1850 it became Scindh. By about 1860 it changed to Sindh. The spelling Sindh came by about 1880.

Spellings of the towns were standardised for the Imperial Gazetteer of India (1905-1908). Early names and spellings are some times confusing. Following is the list of old and the modern spellings.

Map Atlases of the Bombay Presidency give district-wise economic development, specially of agriculture, population growth, and communications. The Government of India also issued periodic economic maps.

All maps were dated with a few exceptions. Most of the map makers were engaged on Survey of Sindh. Some of them played an important role in Sindh.

The maps issued by the Survey of India were printed from Calcutta or Dehra Dun. The Quarter Master General of Bombay Army issued maps mostly from Bombay. The Bombay government issued maps of Sindh up to 1935, but some maps, specially those to accompany settlement reports, gazetteers etc., were printed in Karachi after 1902.

Following is the list of these maps, with year of preparation or publication and location number of the various institutes.
